

Eric Julianto

Data Platform Engineer | Open-Source Data Infrastructure, Observability, and Distributed Systems

Jakarta, Indonesia | ericjulianto00@gmail.com | +62 812 9985 1190
algonacci.github.io | linkedin.com/in/eric-julianto | github.com/algonacci

Professional Summary

Data and platform-focused engineer with hands-on experience across open-source infrastructure, distributed services, observability stacks, telemetry pipelines, and cloud-connected systems. Skilled in containerized environments, data ingestion workflows, retrieval pipelines, time-series processing, structured extraction, pipeline orchestration, and modern data infrastructure spanning PostgreSQL, Redis, ClickHouse, RabbitMQ, MinIO, and Dockerized deployments. Positioned for Data Platform Engineer, Data Infrastructure Engineer, and Platform Engineer tracks.

Core Skills

Data Infrastructure: PostgreSQL, MySQL, Redis, ClickHouse, MinIO, RabbitMQ

Data Engineering: Data Pipelines, ETL, Ingestion Workflows, Retrieval Pipelines, Time-Series Processing, Structured Extraction, Pipeline Orchestration, Batch Processing

Observability: Prometheus, Grafana, Loki, Tempo, Zabbix, LibreNMS, SNMP, Telemetry, Log Aggregation

Infrastructure & Platform: Docker, Linux, Proxmox, Virtualization, Cloudflare, VPS, Hybrid Infrastructure, Docker Compose

Distributed Systems: Messaging Systems, Service Orchestration, API Integration

Automation & Development: Python, SQL, Bash, JavaScript

Supporting: RAG, LangChain, MCP, Vector Retrieval

Certifications

- **AWS Certified Cloud Practitioner (CCP)**
- **MikroTik Certified Network Associate (MTCNA)**
- **MikroTik Certified Routing Engineer (MTCRE)**
- **Kubernetes Bootcamp** — adinusa.id

Data Infrastructure Projects

Omniflow Data Infrastructure

Platform infrastructure

- Designed and deployed Dockerized distributed infrastructure spanning PostgreSQL, Redis, RabbitMQ, and MinIO for modular data service architecture with telemetry aggregation and operational monitoring.
- Built platform-oriented data infrastructure workflows spanning messaging systems, object storage, observability tooling, and distributed service interoperability.
- Configured data ingestion and pipeline orchestration workflows for cross-module data processing and service-to-service data flow.

Tech stack: Docker, PostgreSQL, Redis, RabbitMQ, MinIO, Prometheus, Grafana, Loki, Tempo

Telemetry Analytics Pipeline

Data infrastructure

- Built telemetry-oriented analytics workflows using ClickHouse for high-volume metrics querying, structured event processing, and operational telemetry analysis.
- Integrated Grafana dashboards and observability pipelines for real-time infrastructure visibility, metrics collection, and telemetry-driven diagnostics.
- Explored time-series querying and infrastructure analytics workflows across distributed containerized environments.

Tech stack: ClickHouse, Grafana, Telemetry, SQL, Docker, Prometheus

RAG Retrieval Pipeline

Data pipeline

- Designed retrieval-oriented ingestion and indexing workflows for structured multi-document information access using vector-based retrieval approaches.
- Built orchestration-aware retrieval pipeline supporting document chunking, context-aware ranking, and grounded response generation.
- Integrated structured extraction and ingestion workflows for scalable document processing and retrieval orchestration.

Tech stack: Python, RAG, LangChain, Vector Retrieval, Document Processing, Ingestion

Financial Forecasting Pipeline

Data pipeline

- Developed a real-time data ingestion pipeline for stock market analysis with API-driven time-series workflows and structured processing.
- Integrated time-series forecasting models with live data feeds for continuous prediction and market intelligence delivery.
- Built ETL-aware ingestion and transformation workflows for structured financial data processing and analytics.

Tech stack: Python, Time-Series Processing, Financial APIs, Data Ingestion, ETL, Forecasting

Document Intelligence Pipeline

Data pipeline

- Built a document processing pipeline with OCR-based structured extraction, chunking, and translation orchestration for multi-format document workflows.
- Implemented retrieval-aware processing with grounded follow-up querying for document-grounded intelligence extraction.

Tech stack: Python, OCR, Structured Extraction, Document Processing, RAG

Monitoring & Observability Pipeline

Monitoring infrastructure

- Deployed a full observability pipeline using Prometheus for metrics collection, Loki for log aggregation, and Tempo for distributed tracing.
- Configured Grafana dashboards for real-time infrastructure monitoring, alerting, and operational telemetry visualization.
- Built telemetry-driven monitoring workflows for infrastructure visibility and operational diagnostics across distributed services.

Tech stack: Prometheus, Grafana, Loki, Tempo, Telemetry, Monitoring, Alerting

Experience

Bangkit Academy

Feb 2023 – Jan 2025

Machine Learning Mentor & Advisor

- Guided learners through applied project execution in a structured cohort environment, reinforcing engineering habits around debugging and reproducible problem solving.
- Collaborated with instructors to refine learning materials and improve assignment clarity for a more execution-focused learning path.

ZettaByte Pte Ltd.

May 2022 – Aug 2022

AI Developer

- Built application components including database integration, chatbot functionality, and deployment workflows as part of a broader product implementation.
- Monitored development execution, tracked progress, and followed through on delivery plans during implementation cycles.

Education

Universitas Esa Unggul

Mar 2025 – Present

Computer Science

- Area of interest: Data Engineering, Distributed Systems, Platform Engineering
- GPA: 4.00

Universitas Bunda Mulia

Aug 2019 – May 2024

Hospitality and Tourism

- GPA: 3.67
- TOEFL equivalent score: 567
- Recognition: Mahasiswa Berprestasi

Bangkit Academy led by Google, Tokopedia, Gojek & Traveloka

Jan 2022 – Jul 2022

Machine Learning

- GPA equivalent score: 4.0
