Professional Summary

Data and platform-focused engineer with hands-on experience across open-source infrastructure, distributed services, observability stacks, telemetry pipelines, and cloud-connected systems. Skilled in containerized environments, orchestration workflows, retrieval pipelines, time-series processing, and modern data infrastructure spanning PostgreSQL, Redis, RabbitMQ, MinIO, and Dockerized deployments. Positioned for Data Platform Engineer, Data Infrastructure Engineer, and Platform Engineer tracks.

Core Skills

Data Infrastructure: PostgreSQL, MySQL, Redis, ClickHouse, MinIO, RabbitMQ

Data Engineering: Data Pipelines, ETL, Retrieval Pipelines, Time-Series Processing, Structured Extraction, Data Ingestion

Observability: Prometheus, Grafana, Loki, Tempo, Monitoring, Telemetry, Log Aggregation

Infrastructure & Platform: Docker, Linux, Proxmox, Virtualization, Cloudflare, VPS, Hybrid Infrastructure

Distributed Systems: Docker Compose, Messaging Systems, Service Orchestration, API Integration

Automation & Development: Python, SQL, JavaScript, Bash

Supporting: RAG, LangChain, MCP, Vector Retrieval

Certifications

- **AWS Certified Cloud Practitioner (CCP)**
- **MikroTik Certified Network Associate (MTCNA)**
- **MikroTik Certified Routing Engineer (MTCRE)**
- **Kubernetes Bootcamp** — adinusa.id
- *Future focus: dbt, Apache Airflow, Kafka, Spark*

Data Infrastructure Projects

Omniflow Data Infrastructure

Platform infrastructure

- Designed and deployed Dockerized distributed infrastructure spanning PostgreSQL, Redis, RabbitMQ, and MinIO for modular data service architecture.
- Built observability-oriented monitoring stack with Prometheus, Grafana, Loki, and Tempo integrated for telemetry pipelines and operational visibility.
- Configured messaging layers and object storage for data ingestion workflows, service interoperability, and cross-module data orchestration.

Tech stack: Docker, PostgreSQL, Redis, RabbitMQ, MinIO, Prometheus, Grafana, Loki, Tempo

RAG Retrieval Pipeline

Data pipeline

- Built a retrieval-augmented generation pipeline with document ingestion, chunking, and vector-based retrieval for structured information access.
- Designed retrieval workflows supporting multi-document query, context-aware ranking, and grounded response generation.

Tech stack: Python, RAG, Vector Retrieval, LangChain, Document Processing

Financial Forecasting Pipeline

Data pipeline

- Developed a real-time data ingestion pipeline for stock market analysis with API-driven time-series workflows and structured processing.
- Integrated time-series forecasting models with live data feeds for continuous prediction and market intelligence delivery.

Tech stack: Python, Time-Series Processing, Financial APIs, Data Ingestion, Forecasting

Document Intelligence Pipeline

Data pipeline

- Built a document processing pipeline with OCR-based structured extraction, chunking, and translation orchestration for multi-format document workflows.
- Implemented retrieval-aware processing with grounded follow-up querying for document-grounded intelligence extraction.

Tech stack: Python, OCR, Structured Extraction, Document Processing, RAG

Observability & Telemetry Stack

Monitoring infrastructure

- Deployed a full observability pipeline using Prometheus for metrics collection, Loki for log aggregation, and Tempo for distributed tracing.
- Configured Grafana dashboards for real-time infrastructure monitoring, alerting, and operational telemetry visualization.

Tech stack: Prometheus, Grafana, Loki, Tempo, Telemetry, Monitoring

Experience

Bangkit Academy

Feb 2023 – Jan 2025

Machine Learning Mentor & Advisor

- Guided learners through applied project execution in a structured cohort environment, reinforcing engineering habits around debugging and reproducible problem solving.
- Collaborated with instructors to refine learning materials and improve assignment clarity for a more execution-focused learning path.

ZettaByte Pte Ltd.

May 2022 – Aug 2022

AI Developer

- Built application components including database integration, chatbot functionality, and deployment workflows as part of a broader product implementation.
- Monitored development execution, tracked progress, and followed through on delivery plans during implementation cycles.

Education

Universitas Esa Unggul

Mar 2025 – Present

Computer Science

- Area of interest: Data Engineering, Distributed Systems, Platform Engineering
- GPA: 4.00

Universitas Bunda Mulia

Aug 2019 – May 2024

Hospitality and Tourism

- GPA: 3.67

- TOEFL equivalent score: 567
- Recognition: Mahasiswa Berprestasi

Bangkit Academy led by Google, Tokopedia, Gojek & Traveloka

Jan 2022 – Jul 2022

Machine Learning

- GPA equivalent score: 4.0
