Professional Summary

Cloud and platform-focused engineer with hands-on experience across Dockerized environments, observability stacks, hybrid infrastructure, Linux systems, and distributed service orchestration. Skilled in deployment workflows, CI/CD pipelines, monitoring infrastructure, virtualization, cloud-connected systems, and platform-oriented operations spanning Proxmox, Cloudflare, messaging systems, telemetry-driven diagnostics, and containerized service environments. Positioned for Cloud Engineer, Platform Engineer, DevOps Engineer, and Cloud Infrastructure Engineer tracks.

Core Skills

Cloud & Platform: Docker, Kubernetes, AWS, GCP, Cloudflare, GitHub Actions, GitLab CI

Observability: Prometheus, Grafana, Loki, Tempo, Zabbix, LibreNMS, OpenTelemetry, SNMP, Telemetry, Alerting

CI/CD & Automation: GitHub Actions, GitLab CI, Docker Compose, Deployment Workflows, PM2, Bash

Infrastructure: Linux, Ubuntu, Proxmox, Virtualization, Hybrid Infrastructure, VPS, Cloudflare Tunnel, Nginx

Distributed Systems: RabbitMQ, Redis, PostgreSQL, MinIO, Service Orchestration

Networking: WireGuard, Tailscale, VPN, MikroTik, VLAN, Routing

Development: Python, JavaScript, TypeScript, Bash

Certifications

- **AWS Certified Cloud Practitioner (CCP)**
- **MikroTik Certified Network Associate (MTCNA)**
- **MikroTik Certified Routing Engineer (MTCRE)**
- **Ruijie Certified Network Associate — Routing & Switching (RCNA-RS)**
- **Kubernetes Bootcamp** — adinusa.id

Platform & Infrastructure Projects

Omniflow Platform Infrastructure

Platform infrastructure

- Designed and deployed Dockerized distributed infrastructure spanning PostgreSQL, Redis, RabbitMQ, and MinIO for modular platform service architecture.
- Built observability-oriented monitoring stack with Prometheus, Grafana, Loki, and Tempo integrated into the platform for telemetry, operational visibility, and infrastructure diagnostics.
- Configured Cloudflare Tunnel for secure external access and PM2 for process orchestration across containerized services.
- Built CI/CD-oriented deployment workflows using Docker, GitHub Actions, and containerized service environments for infrastructure automation.

Tech stack: Docker, PostgreSQL, Redis, RabbitMQ, MinIO, Prometheus, Grafana, Loki, Tempo, Cloudflare, PM2, GitHub Actions

Monitoring & Observability Stack

Monitoring infrastructure

- Deployed full observability pipeline using Prometheus for metrics collection, Loki for log aggregation, Tempo for distributed tracing, and Grafana for dashboarding and alerting.
- Integrated Zabbix and LibreNMS for SNMP-based infrastructure health monitoring, operational diagnostics, and multi-protocol telemetry aggregation.
- Implemented OpenTelemetry instrumentation for unified telemetry collection across services and platform infrastructure components.

Tech stack: Prometheus, Grafana, Loki, Tempo, Zabbix, LibreNMS, OpenTelemetry, SNMP, Alerting

Hybrid Homelab Infrastructure

Homelab

- Built a hybrid homelab environment using Proxmox virtualization, Docker containerization, and Linux-based services for infrastructure experimentation and operational skill development.
- Configured VPN tunnels with WireGuard and Tailscale for secure remote access across distributed nodes and hybrid cloud connectivity.
- Integrated VPS deployment with local infrastructure for hybrid cloud workflows spanning compute, storage, and networking.
- Deployed monitoring stack (Prometheus, Grafana, Zabbix) for operational visibility across distributed infrastructure.

Tech stack: Proxmox, Docker, Linux, WireGuard, Tailscale, VPS, Prometheus, Grafana, Zabbix

Cloudflare Tunnel & Remote Infrastructure Access

Network architecture

- Deployed Cloudflare Tunnel for secure external exposure of internal services without open inbound ports.
- Combined with WireGuard and Tailscale for layered remote access architecture supporting hybrid work and multi-site connectivity.

Tech stack: Cloudflare Tunnel, WireGuard, Tailscale, VPN, Remote Access

Experience

Bangkit Academy

Feb 2023 – Jan 2025

Machine Learning Mentor & Advisor

- Guided learners through applied project execution in a structured cohort environment, reinforcing engineering habits around debugging and reproducible problem solving.
- Collaborated with instructors to refine learning materials and improve assignment clarity for a more execution-focused learning path.

ZettaByte Pte Ltd.

May 2022 – Aug 2022

AI Developer

- Built application components including database integration, chatbot functionality, and deployment workflows as part of a broader product implementation.
- Monitored development execution, tracked progress, and followed through on delivery plans during implementation cycles.

Education

Universitas Esa Unggul

Mar 2025 – Present

Computer Science

- Area of interest: Cloud Computing, Distributed Systems, Platform Engineering
- GPA: 4.00

Universitas Bunda Mulia

Aug 2019 – May 2024

Hospitality and Tourism

- GPA: 3.67
- TOEFL equivalent score: 567
- Recognition: Mahasiswa Berprestasi

Bangkit Academy led by Google, Tokopedia, Gojek & Traveloka

Jan 2022 – Jul 2022

Machine Learning

- GPA equivalent score: 4.0
